

DERMACEUTICALS FOR MEN

SKINN Eye Cream 15ml

Matrixyl- more effective and less irritating than RETINOL and VITAMIN C

With Matrixyl™ 3000, Hesperidin and Antioxidants

Revolutionary combination of active concentrated pentapeptides, bioflavonoids and antioxidants leading to a reported reduction of fine lines and wrinkles by up to 68% over 2 month period. Actively increases collagen production and reduces eye puffiness and dark circles. Retinol and retinoid based products work by irritating the skin and lead to skin drying. Pentapeptides are a new class of antiaging peptides demonstrated to be as effective, but gentler than retinoid and VIT C anti-aging ingredients.

Features and Benefits

MULTIFUNCTIONAL

- Rich in concentrated hydrating agents, antioxidants and powerful anti-aging peptides

MATRIXYL™ 3000,

- Patented Dipeptide-2 Palmitoyl Tetrapeptide-3 (Matrixyl™ 3000): stimulates growth of collagen, elastin and hyaluronic acid improving and preventing fine lines and wrinkles

HESPERIDIN METHYL CHALOCONE

- Reduces capillary fragility and eyelid puffiness

MULTIPLE ANTI-INFLAMMATORY AGENTS

- Omega 6 fatty acid, Panthenol (Vit B5) , Aloe Barbadensis all act to heal and soothe

ANTIOXIDANTS

- Superoxide dismutase and Vitamin E

RECOMMENDATION

- Clients with Dark circles or excessive bagginess
- Multiple crows feet
- Photoaged skin

SCIENCE AND SKINN

Matrixyl™ 3000- more effective and less irritating than RETINOL and VITAMIN C

Matrixyl is a type of pentapeptide or protein. Pentapeptides act to stimulate skin's natural rebuilding processes and are a new class of effective, but gentler anti-aging options.

Matrixyl™ 3000 steadily diminishes the appearance of wrinkles by helping to restore the dermal matrix. It is a complex of 2 peptides or "matrikines": Palmitoyl Pentapeptide and Palmitoyl Tetrapeptide. Both components have different anti-aging effects, but in combination work synergistically

- Palmitoyl Pentapeptide: stimulates growth of collagen, elastin and hyaluronic acid to fill wrinkles naturally from within
 - Palmitoyl Tetrapeptide: inhibits and reverses glycation damage thus preventing sagging and loss of youthful contours
- Results visible after 4 weeks of diligent application
 - Results continue to improve with long term application

Scientific Proof

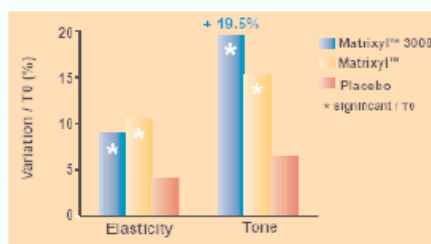

Evidence In Vitro Studies: Stimulation of gene expression

Several studies evaluating the regulation of skin genes, using DNA-Array techniques on a reconstructed epidermis and a fibroblast culture from 60 year old donors incubated with Matrixyl™3000. The efficacy of Matrixyl was compared with transforming growth factor beta (TGF-beta) for its ability to increase collagen type I synthesis, collagen type I synthesis and glycosaminoglycans (GAGs). The profile for gene activation complemented the skin's natural mechanisms for cutaneous restructuring.

In Vivo Studies

Clinical study in which 2 panels of 23 volunteers aged 39 to 74 applied a cream containing 3% Matrixyl™ 3000 to one-half of their face against a placebo or 3% Matrixyl™ on the other half twice a day for 56 days. Anti-wrinkling and lifting efficacy was assessed by profilometry and photography.

Assessment of elasticity and tone

Matrixyl™3000 displays major and significant improvements in elasticity and tone.
